## What's New In?

\* Password protect and lock files in your Windows environment \* Monitor your privacy easily \* Protect files for everyone \* Customizable settings

Microsoft Office 2010 is one of the most used, popular, and most effective office suites around, but also a large piece of work. A typical office suite may include dozens or even hundreds of extensions or add-ons (also known as components), each of which can give you a particular function when you use it. One such feature is the ability to edit files offline, which is very useful when working on the go, or carrying around your device (like your mobile phone) while doing so. Another useful feature is the ability to synchronize files across multiple devices (on the same network, or anywhere else you have access to a computer), which is especially useful for those of you who tend to use multiple laptops or mobile phones at any given time. Such connectivity is handled by the Document Services tool, which is part of the Office 2010 suite.

Microsoft Office 2010 Document Services Description To work with the Document Services tool in Office 2010, you only have to select the tools from the Ribbon, click the Settings tab, and then navigate to the Folder Options option. From there, you can enable the "Save Microsoft Office Documents Offline" option to enable offline connectivity and synchronize files across multiple devices. This feature can also be turned off so that files are only saved when connected to the network, and therefore can only be accessed online. When enabled, the Document Services tool will save all files and/or documents found in the selected directory to the C:\Users\%User%\AppData\Roaming\Microsoft\Office\%Version%\Recent\Logs folder. It will only monitor the selected folder and only save documents to the specified folder if they have not already been saved. Unfortunately, this function does not apply to Office 2007 or Office 2003, so this feature was never available in that version of Office. The Folder Options settings can be found inside the File Options, and the settings are as follows: [ [ [ [ "FolderOptions"
