The frontal sinus and the ethmoidal cells are the two most commonly injured areas in patients with rhino-orbital injuries. The aim of this study was to present the treatment and follow-up of these injuries. Rhinosurgery techniques, new implants and the established indication to primary or delayed intervention and their impact on the therapeutic outcome are reviewed. Retrospective case series. In a 2.5-year period, 23 patients (17 men, 6 women) with rhino-orbital injuries were treated at our hospital. Fifteen patients had isolated injuries of the frontal sinus, four patients of the frontal sinus and ethmoidal cells, four patients of the frontal sinus, maxillary sinus, and ethmoidal cells, one patient of the frontal sinus and the sphenoid sinus, and one patient of the frontal sinus, nasal septum and ethmoidal cells. One patient had been treated with a silastic sheet graft after an infection following an isolated frontal sinus injury. Seventeen patients underwent an early intervention (in most patients within 3 days) including at least frontal sinus and ethmoidal cells endoscopy. Three patients underwent a late intervention (8-15 months) for frontal sinus and ethmoidal cells injuries or a combination of injuries. After the early intervention, all but one patient had a good outcome (95%). After the late intervention, the outcome was excellent in one patient, good in two patients, and poor in one patient. Simultaneous ethmoidal cells injury and frontal sinus injury is rare and usually is caused by a zygomatico-orbital fracture. For the initial treatment of frontal sinus injuries, a combined approach (endoscopic and endonasal) might be superior to the strategy with endoscopy only. Therefore, an early endoscopic intervention seems advisable in cases of isolated frontal sinus injuries. In case of concomitant ethmoidal cells injuries, the main purpose should be a good functional outcome. In case of concomitant maxillary and ethmoidal cells injuries, an early radical removal of the maxillary sinus and ethmoidal cells with a simultaneous reconstruction of the lateral wall is indicated.Can someone please tell me how to

When a hard disk fails to recover data after a format, it makes sense to try the recovery services. But what can you do when the files are missing forever? How can you recover old files that no longer can be located? For this reason, people developed software that allows you to restore files from the hard drive and re-enter them into a computer or re-create them in a new version. The fact that the data was lost can happen due to various reasons such as file system error, virus infection, or the loss of power. Even a simple crash can damage your data. In these cases, we can find several programs that can help us recover any type of data from any computer or mobile device. If you need to retrieve your lost music, for example, you can use the programs where you can find a duplicate or copy of the song that you have heard. The situations where a data recovery program can be used are quite common and include the following:

- The loss of a workbook (for example, in the case of a spreadsheet), a financial record, or a confidential document;
- The loss of a book (for example, in the case of a dictionary), a medical record, or a report (for example, in the case of a law firm);
- The loss of data that you have lost accidentally, for example, a program directory, computer configuration information, or configuration files.

Data recovery programs are not only useful for recovering data, but also for changing a hard disk and making it available to re-enter all the lost data, but if you need to recover data in order to perform a data transfer to another device, a data recovery program is not the best choice. Many users are interested in the possibility of changing a device and keep the old data, but for this reason, we need to find a different tool to do this. In the case of data recovery and media, data recovery tools or software can be very useful. These programs have the unique characteristic of being able to enter all the data from a device that is damaged or is no longer

Spreadsheets in conjunction with Macros are useful tools for businessmen and bankers to track clients and their transactions. Excel 2011 for Mac is a desktop version of the world's most popular spreadsheet software for Windows. Mac users can take advantage of almost all functions you can find in the Excel spreadsheet used for Microsoft Windows. The spreadsheet has a basic table which is used to represent the sequence of events as they take place over a specified time. If you are using Microsoft Excel for Mac then, you can use a couple of features that are available out of the box. In the standard options, this type of spreadsheet will be given a name, a format and a "save as". It's very simple to create a new spreadsheet and customize it. In case you want to apply complex macros, you need to download the Excel for Mac 2011 application. Mac users can also use the Excel for Mac 2011 application to create graphs, charts and combined reports. If you are using Mac OS X 10.7 Lion, Excel for Mac 2011 app is available for free download. How is Excel for Mac 2011 different from the standard spreadsheet? Excel for Mac 2011 version brings a few new features to the table. Formulas and functions MS Office Excel spreadsheets are great when you need to track and log event sequences, keeping track of sales and clients. The type of spreadsheet makes the difference in the way it works. The Excel for Mac 2011 application does the job of tracking and logging events on an Excel style spreadsheet for Mac users. A spreadsheet has a cell structure which is used to hold different values. It does not require precise formatting as the format is assigned automatically. It is also possible to put in formulas as well as functions to change the structure and add various tools that can greatly change the look of your spreadsheet. Excel for Mac 2011 will give you a lot of helpful functions that will not be included in standard Excel software. The spreadsheet has a wide range of tools to track bookings, stocks, currencies, leases, and plenty of other different options. To improve how you look at the data, you can also apply many themes to the Excel for Mac 2011 application. Excel for Mac 2011 applications will be great in many scenarios for Mac users who want to efficiently track different kinds of items. Mac users can download the Excel for Mac 2011 software for free from the Mac App Store.

## What's New in the?

The program's interface is extremely intuitive. All you have to do is drag and drop the files and then click Combine PDF. You can rearrange the files in the list, thus choosing the order in which their respective content will be displayed in the new document. Unfortunately, this is all the control you have over the PDFs; for example, you can't choose to merge only specific pages. Also, make sure that you don't use documents with restrictions (unless you know the exact passwords), otherwise you might not be able to open the new PDF. Windows Explorer integration One interesting feature is that Free Combine PDF 4dots can be integrated into Windows Explorer and accessed from the context menu. Simply right-click while selecting at least two PDFs and then click on the new Combine PDF option. If you this integration make sure you select it during the installation process. While this is a feature that can save you a lot of time, it may still not be enough to make the program a worthy office tool. Free Combine PDF 4dots does the job that it promises, but there are already many other free PDF mergers that seem more versatile and have more useful features.

Q: Can SQLITE trigger a function that will return another table? I have an sqlite trigger that inserts a new row in a table when data is inserted into another table. This works as expected. Does it make sense to have a function in the trigger that can return another table? Something like this: CREATE TRIGGER trigger\_table\_2 AFTER INSERT ON table\_1 BEGIN return select \* from table\_2; END; So I can do something like: insert into table\_1 values (...); select \* from return\_table\_2; Would this work? Is it a good idea? A: Of course it would work, that's the basic purpose of triggers. If there was an error you'd have a row inserted into table\_2, not table\_1 and your select would return an empty table. Of course if you can have both columns of table\_2, do it instead. And of course it depends on what the "return" is for.
